

Folders Structure file For CRA

React is only for Used Design page application (only contain will be changes Inside the Html file)

Readme.md

This file acts like note pad for the application.here we will mention Project description, How to run the project coding standard Used in the project .

Package.Js:

This file consists of project Script and dependence, From here we can check the versions of the dependencies and Script to run and test the application, This is mandatory File

Package-lock.js:

This file holds the versions Information of the dependencies used . This Help Us to run the app Consistency Across Different System .

Npm Install : This Command Install the dependencies of the Project (it Creates the node Modules and package- lack Json)

Gitignore:

This file Blocks the files or folders not to track in the git

Src:

Code Working Directory we will use This Folders all the time to write all Ui Component

Node Modules:

Node Modules Contain the all the dependency codes Required for our project . It Occupies Majority of react app Size (we will prevent node modules changes for tracking in git)
